Personal Code of AI Ethics

Principle	What I Will Do	What I Will Not Do
Protection of youth and minors	Ensure that the youth and minors are not being taken advantage of through the power of AI and technology via invasive or manipulative behavior	Actively engage in any work or project that takes advantage of children in any way, regardless of the potential rewards
Technical Safety Dilemma	Do everything within my power to ensure that any technology which passes through me is working properly and is best benefitting it's users	Allows others to unknowingly use defective technology which may or may not take advantage of their knowledge or capabilities
AI Transparency and Privacy	Ensure that humans understand what they are signing up for and agreeing to when using technology and AI	Allow individuals to use a service or technology without truly understanding what they are doing and how their information might be used

AI being used for good	Use and promote technological interfaces which benefit human good and the lives of all	Use and promote technology which truly is mot good, and in turn sell it as good technology
AI being used for bad	Make myself and my colleagues aware of technology which might be harmful and evasive to my personal safety	Use technology I am uncomfortable with for the sake of pleasing others or simply getting a task done
AI Training Set Bias	Ensure that the training sets I come across are not biased in any way, shape or form and if they are, bring that attention to the table and promote the diversity, equity and inclusion of data sets	Allow data sets to pass by me which are biased, as they can wind up creating more harm and chaos to the individual user rather than the company allowing said data sets to be used
Unemployment Risk	Promote the workforce for any individuals looking for work and do what I can do help others find the work they are looking for with the life they have been given	Promote the extended use of AI and technology which may and can take away jobs from individuals who want to be working

Decision Making Automation	Inform individuals of the decisions made by AI which directly affect them, while also ensuring that I am educated on the decisions which are being made on my behalf	Allow poor decisions to be made on my behalf of that of my colleagues, if I am aware and can prevent from doing so
AI-Powered Addiction	Make myself and others aware of the addiction which can be imposed by AI and educating others on the dangers leading up to and following AI-Powered addiction	Succumb to AI-Powered addiction and allow AI to draw me into gambling, greed, or violence, which will in turn not only affect me, but also those I come in contact with
